COGNICAd API

Querying the Cognica system is the only function offered.

API URL: https://cognica.cs.ucy.ac.cy/COGNICAd/api.php

The API authenticates the user by using Basic Authentication.

Allowed HTTP method: POST

Request body: The request body must be a JSON object containing the following query parameters:

Query parameters(JSON):

1. Policy In Cognica DP CNL
2. Complementary Options
3. Facts
4. Query

Returns (JSON):

1. Cognica Prediction
2. Cognica Summary Explanation

Usage example

Seller Assistant

Policy in natural language:

- Normally, sell a product at its high price.
- You can sell a product at the lower price only if payment is in cash, but normally prefer to sell high.
- Sell a product at low price to regular customers.
- Also sell a product at low price if the buyer can have late delivery.
- In high season you must sell at high prices.

Complementary Options:

- sell the product at its high price,
- sell the product at the lower price

Policy In Cognica DP CNL:

- NORMALLY sell the product at its high price.
- ONLY IF payment is in cash THEN MAYBE sell the product at the lower price.
- IF the buyer is a regular customer THEN sell the product at the lower price.
- IF the buyer can have late delivery THEN sell the product at the lower price.
- IF it is high season THEN ALWAYS sell the product at its high price.

Scenario

Facts:

- payment is in cash
- the buyer is a regular customer
- it is **NOT** high season

Query: sell the product at the lower price

Expected response:

Cognica Prediction: Yes

The given fact(s), "The buyer is a regular customer" supports the conclusion, "Sell the product at the lower price".

Example request data:

{

"**actionType**": "**getPrediction**",

"**policyInCognicaDPCNL**": "NORMALLY sell the product at its high price.\r\nONLY IF payment is in cash THEN MAYBE sell the product at the lower price.\r\nIF the buyer is a regular customer THEN sell the product at the lower price.\r\nIF the buyer can have late delivery THEN sell the product at the lower price.\r\nIF it is high season THEN ALWAYS sell the product at its high price.",

"**query**": "sell the product at the lower price",

"**complementaryOptions**": [

"sell the product at its high price",

"sell the product at the lower price"

],

```
  "facts": [
    {
      "fact": "payment is in cash",
      "factHold": true
    },
    {
      "fact": "the buyer is a regular customer",
      "factHold": true
    },
    {
      "fact": "it is high season",
      "factHold": false
    }
  ]
}
```

API Response:

```
{
  "hasError": false,
  "cognicaPrediction": "Yes",
  "cognicaSummaryExplanation": "The given fact(s), \"The buyer is a regular customer\" supports the conclusion, \"Sell the product at the lower price\"."
}
```
