ESC AI CVD PREVENT: Test Cases

Few things to note:

- Make sure to click the **Clear Data** button between every case; the form remembers previous sessions.
- If a result shows **"Tell us more"**, click the arrow and answer the follow-up questions (Yes / No / ?) before checking the results.
- You can Inspect the Console with F12 to see which facts were sent for each decision point, and the API's response
- Entering a name has no effect on the diagnosis, so it can be left blank

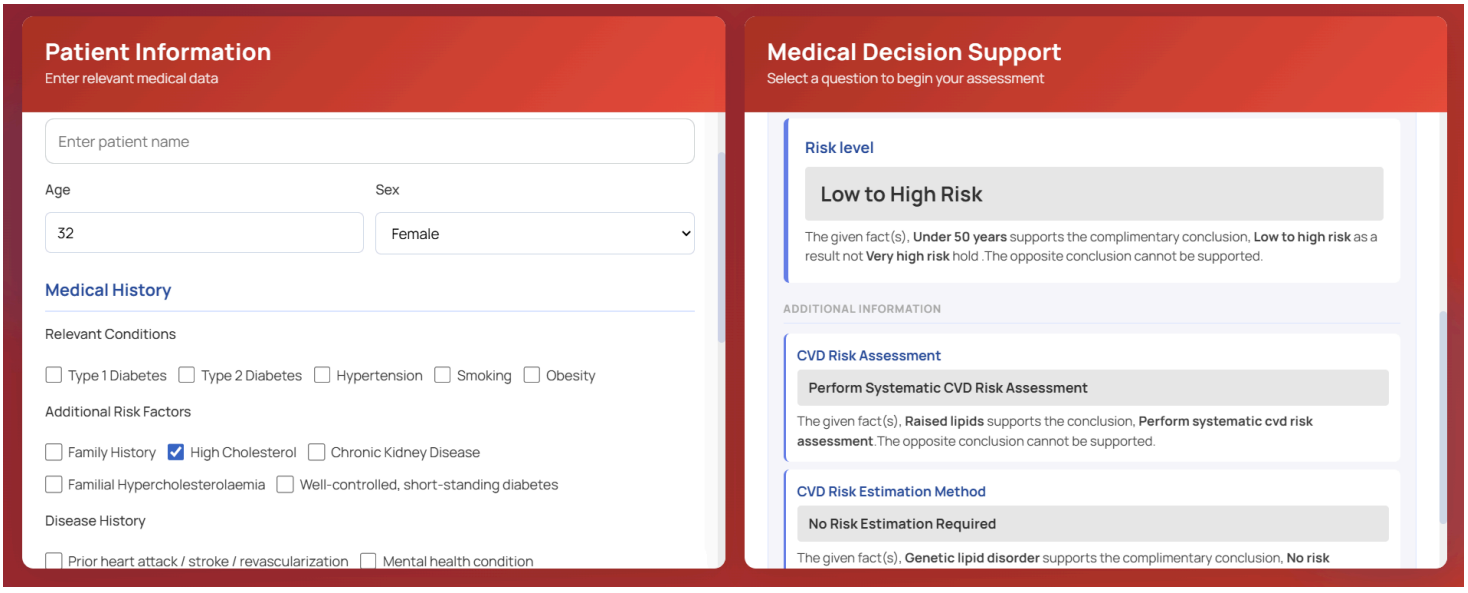

Case 1: Healthy Young Adult

Enter in the form

- **Age:** 32 **Sex:** Female
- **Additional Risk Factors:** High Cholesterol

Click "What's my risk?"

- **Risk Level:** Low to High Risk
- **CVD Risk Assessment:** Perform Systematic CVD Risk Assessment

- **CVD Risk Estimation Method:** Use SCORE2

Click "What treatment is right for me?"

- **LDL-Cholesterol Treatment Intensification:** Stepwise LDL treatment guidance appears

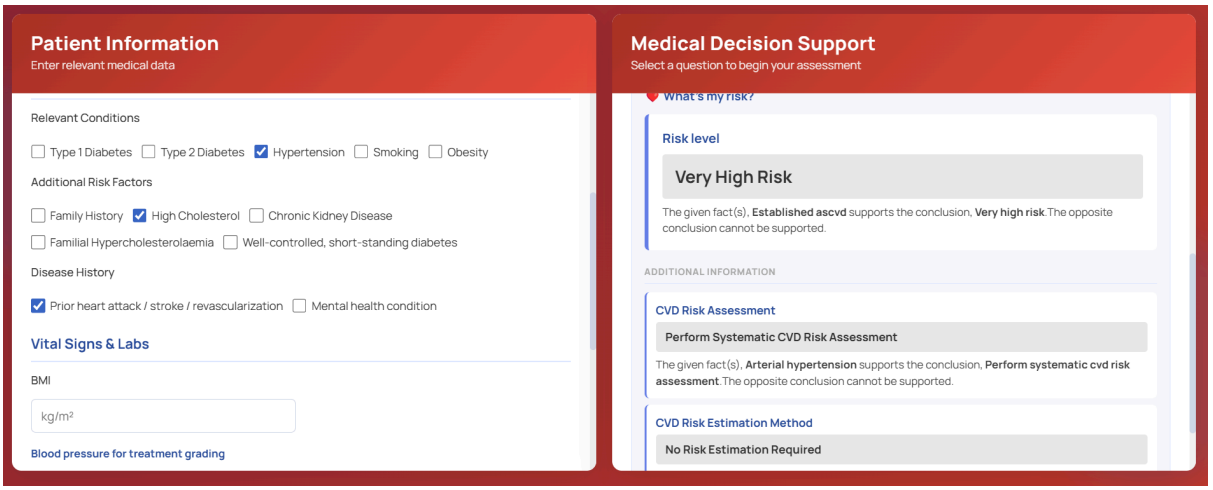

Case 2: Established ASCVD

Enter in the form

- **Age:** 65, **Sex:** Male
- **Disease History:** Prior heart attack / stroke / revascularization
- **Additional Risk Factors:** High Cholesterol
- **BP Systolic:** 148, **Diastolic:** 88

Click “What’s my risk?”

- **Risk Level:** Very High Risk
- **CVD Risk Assessment:** No systematic assessment needed (established ASCVD)

Click “What treatment is right for me?”
(If "Tell us more" appears under either section, click the arrow and set all options to “No”, then click Update answer.)

- **Antithrombotic Therapy:** Aspirin recommended
- **Hypertension Treatment:** Initiate Drug Treatment

- **LDL-Cholesterol Treatment Intensification:** Use Stepwise LDL Treatment

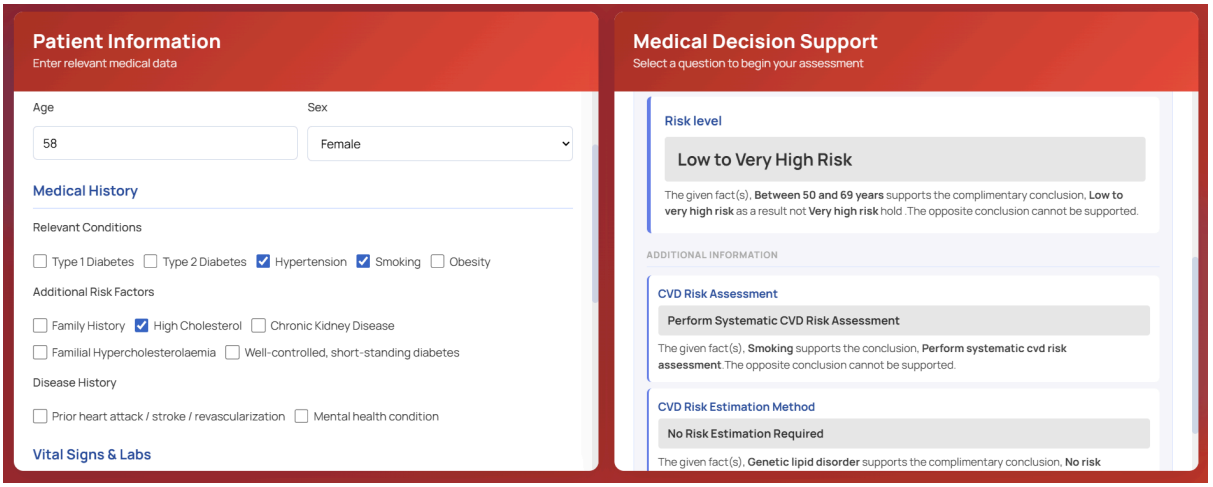

Case 3: Hypertension Grade 2

Enter in the form

- **Age:** 58, **Sex:** Female
- **Conditions:** Smoking
- **Additional Risk Factors:** High Cholesterol
- **BP Systolic:** 168, **Diastolic:** 98

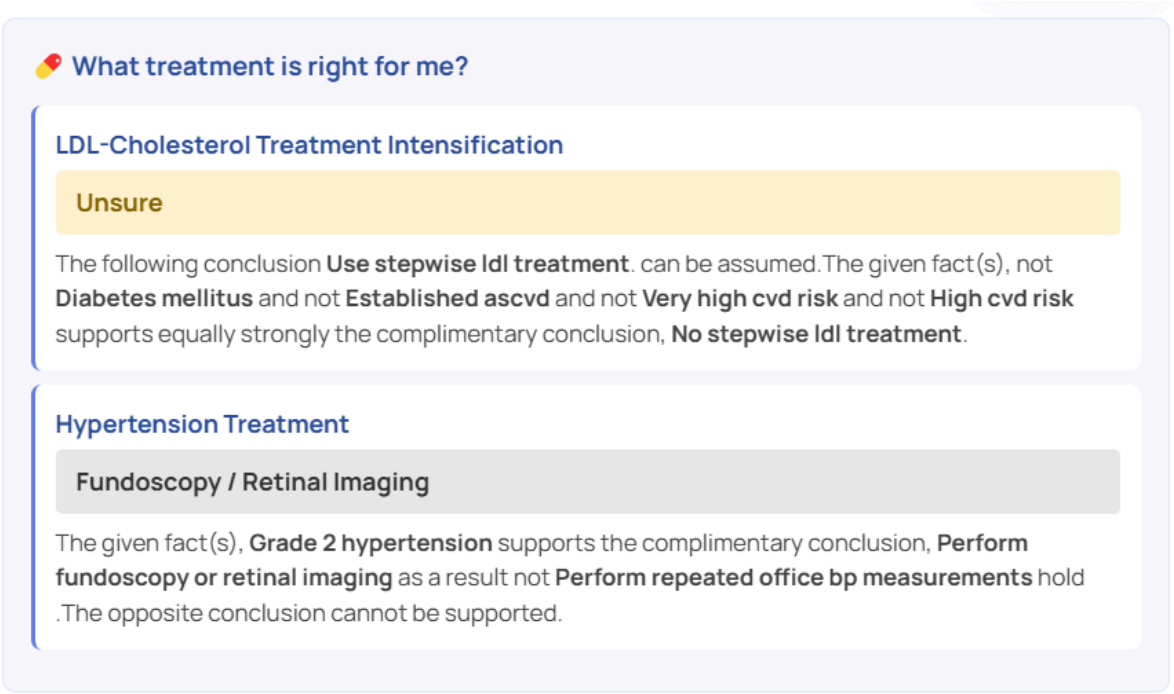

Click “What’s my risk?”

- **Risk Level:** Low to High Risk
- **CVD Risk Assessment:** Perform Systematic CVD Risk Assessment
- **CVD Risk Estimation Method:** Use SCORE2

Click “What treatment is right for me?”
If "Tell us more" appears under either section, click the arrow and set all options to “No”, then click Update answer.

- **Hypertension Treatment:** Initiate Drug Treatment, Two-Drug Combination suggested
- **LDL-Cholesterol Treatment Intensification:** Unsure; Use Stepwise LDL Treatment

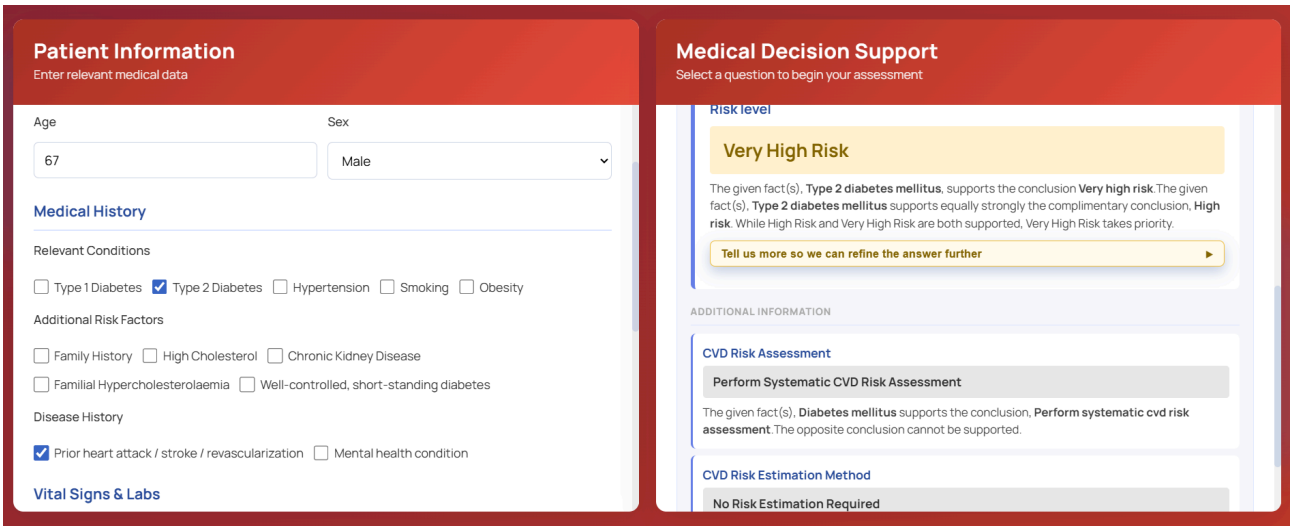

Case 4: Diabetes + Prior ASCVD

Enter in the form

- **Age:** 67, **Sex:** Male
- **Conditions:** Type 2 Diabetes
- **Disease History:** Prior heart attack / stroke / revascularization

Click “What’s my risk?”

- **Risk Level:** Very High Risk
- **CVD Risk Assessment:** Perform Systematic CVD Risk Assessment
- **CVD Risk Estimation Method:** No Risk Estimation Required

Click “What treatment is right for me?”

- **Dyslipidaemias in DM:** LDL ≥50% reduction + target <1.4 mmol/L
- **Antithrombotic Therapy:** Aspirin recommended

Case 5: Well-Controlled Type 1 Diabetes

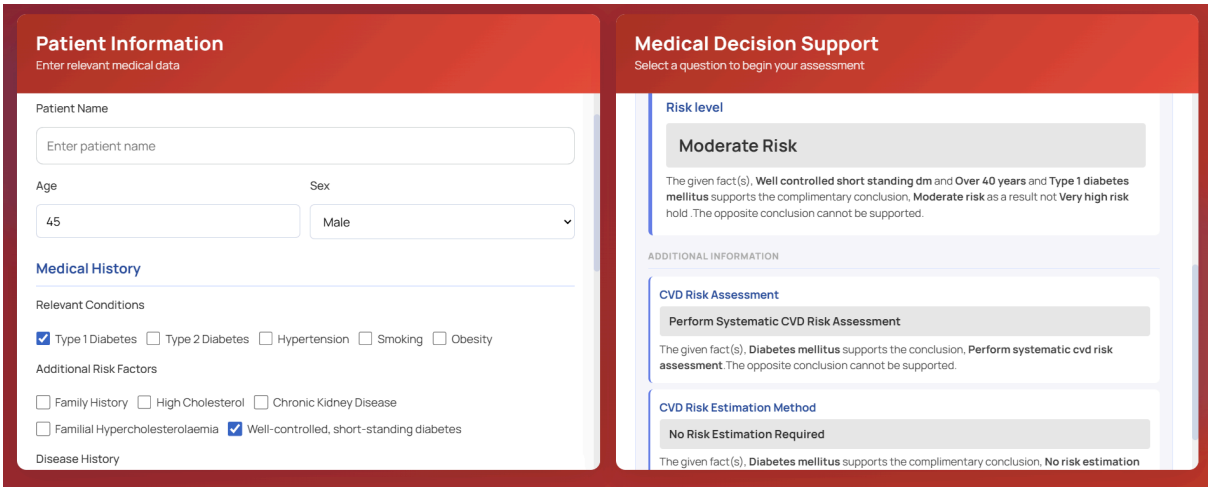

Enter in the form

- **Age:** 45, **Sex:** Male
- **Conditions:** Type 1 Diabetes

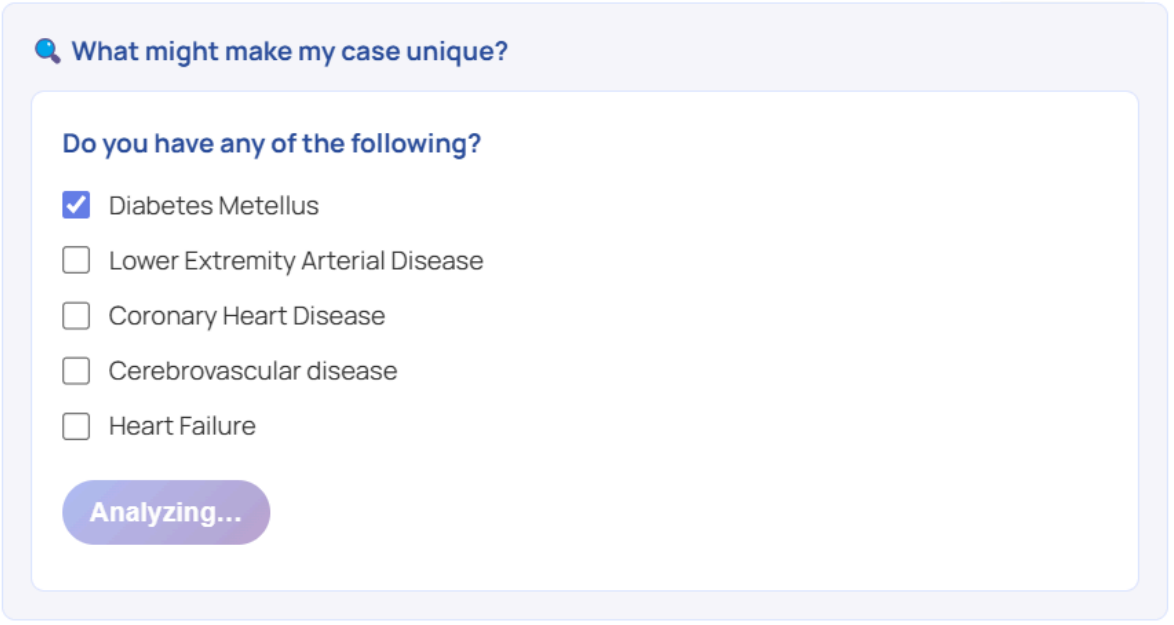

- **Additional Risk Factors:** Well-controlled, short-standing diabetes

Click “What’s my risk?”

- **Risk Level:** Moderate Risk
- **CVD Risk Assessment:** Perform Systematic CVD Risk Assessment
- **CVD Risk Estimation Method:** No Risk Estimation Required

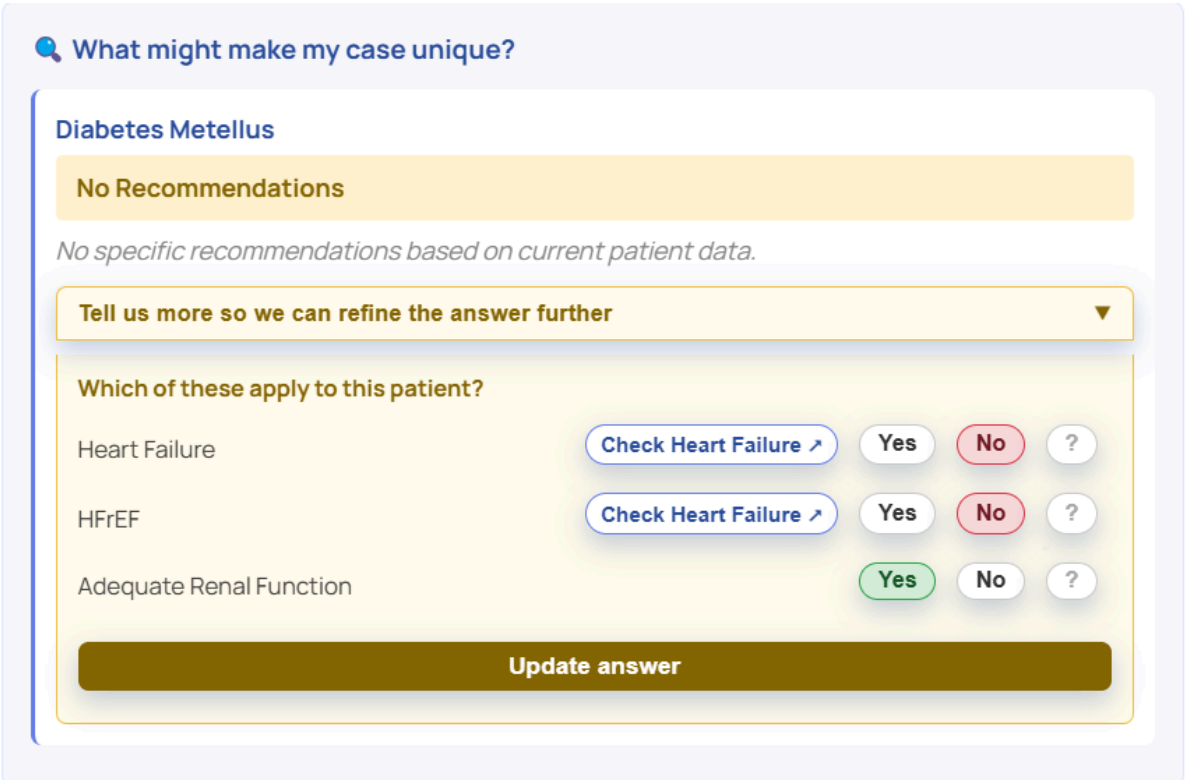

Click “Additional Recommendations” → “Show assessments” (Diabetes Metellus should already be checked)

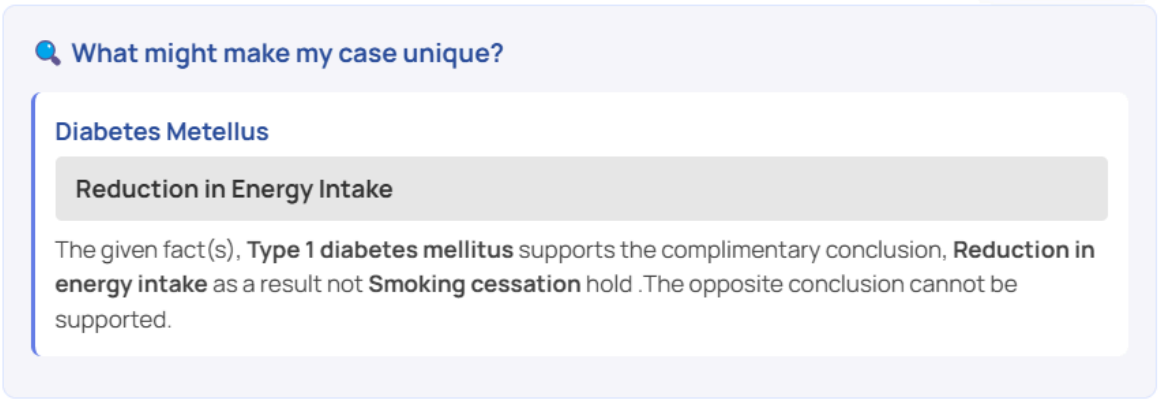

Under Diabetes Mellitus, a "Tell us more" prompt will appear. Click the arrow and set:

- **Heart Failure → No**
- **HFrEF → No**
- **Adequate Renal Function → Yes**

Then click Update answer

Diabetes Mellitus: Reduction in Energy Intake

Case 6: Post-ACS with Heart Failure

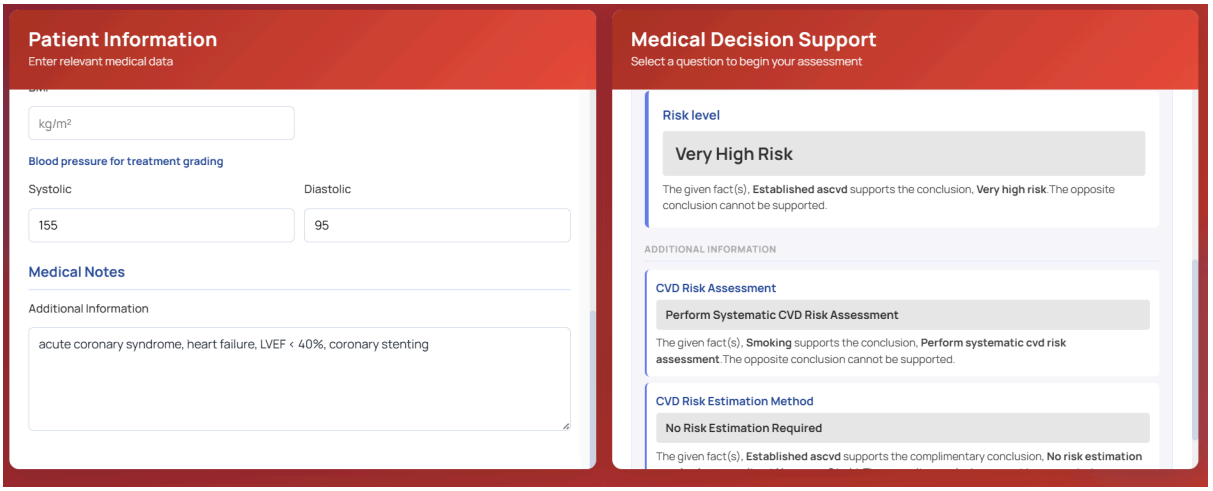

Enter in the form

- **Age:** 60, **Sex:** Male
- **Conditions:** Smoking, Hypertension
- **Disease History:** Prior heart attack / stroke / revascularization
- **BP Systolic:** 155, **Diastolic:** 95

- **Medical Notes:** Paste: “acute coronary syndrome, heart failure, LVEF < 40%, coronary stenting”

Click “What’s my risk?”

- **Risk Level:** Very High Risk
- **CVD Risk Assessment:** Perform Systematic CVD Risk Assessment
- **CVD Risk Assessment:** No systematic assessment needed

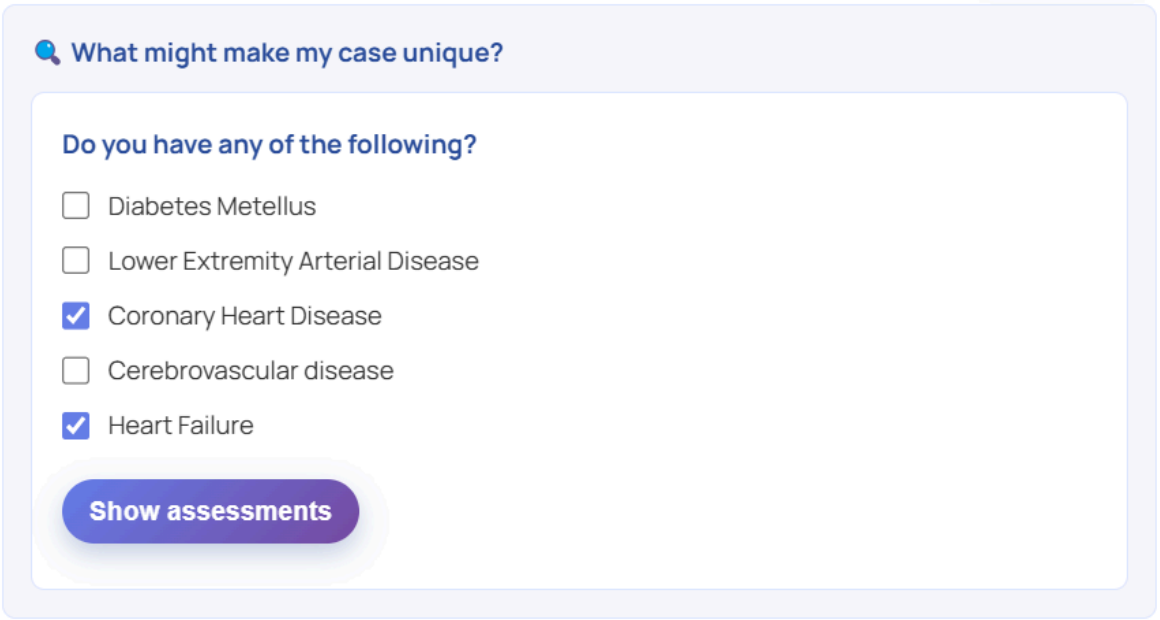

Click “What treatment is right for me?”

- **Antithrombotic Therapy:** Aspirin + P2Y12 Inhibitor (post-ACS with stenting)
- **Hypertension Treatment:** Initiate Drug Treatment

Click “Additional Recommendations” → check “Heart Failure” and “Coronary Heart Disease” → “Show assessments”

When "Tell us more" appears under the “Coronary Heart Disease” section, click the arrow and set all options to “No”, then click Update answer.

- **Heart Failure:** ACE Inhibitor, Beta Blocker, Mineralocorticoid Receptor Antagonist, Dapagliflozin / Empagliflozin
- **Coronary Heart Disease:** ACE Inhibitor / ARB, Beta Blocker
